

# Inmate Fingerprint Identification System

The Inmate Fingerprint Identification System (IFIS) by Technical Services Group (TSG) is your affordable solution to positive inmate ID. The system uses an inexpensive fingerprint scanner to capture the inmate's fingerprint and link it to a photograph of the inmate. **Know** you have the right one **before** you turn 'em loose.

As inmates enter the facility, a staff member registers their fingerprint and takes a photo with the included camera. The average registration takes less than 2 minutes. If the inmate has been registered during a prior visit, the system will retrieve that inmate's Information Screen. They can change their name, their physical appearance - but not their fingerprint!

When it is time to release an inmate from the facility, they touch their registered finger to the scanner and their fingerprint is matched with their photograph (IFIS can search 5,000 fingerprint templates per second). When the match is made the Certifying Officer prints a Inmate Verification Form that is placed in the inmate's folder. You can be assured that the right person is being released.
